

CSI TECHNOLOGY GROUP

InfoShare Select

OUR MISSION

CSI Technology Group is dedicated to the development of premium case and document management systems utilizing the most advanced software technology to support our clients in state and county agencies. **InfoShare**, CSI's leading software integrates the applications of records management, document management, word processing and criminal mug shot systems into one single total solution, specially designed for the criminal justice community.

The InfoShare system for **Intelligence** provides subject record sets with an extensive range of information variables for organized information input, display and search retrieval. Search and display features permit the user to view all data on a subject in one profile record and to print a profile or group of profiles with one easy command.

Multiple search commands are offered, which permit the user to locate one or a group of subjects by factors such as: Associates, Organizations, Sources, Locations, etc. The search engine locates all subject records with the chosen criteria and presents a results list. It also includes a document management feature which permits both electronic and scanned documents to be associated with the subject's record set. A "full text" search can be done to retrieve those documents with the same text.

FEATURES

- **Security** is enhanced through our Intranet system because users never have direct access to files at the operating system level. They receive their data from the Web Server, isolating them from the true data source through a custom interface enhancing the visual experience.
- InfoShare provides "point and click" access to any documents and/or files pertaining to new and old records as well as for internal departmental messaging.
- InfoShare is **fully customizable** to meet the individual needs of every Prosecutor's Office, Sheriff's Department, Police Department and all other law enforcement agencies.
- Our system was designed using industry standard software that provides **maximum flexibility to integrate with your current databases**. Software can include, but is not limited to: Microsoft Internet Explorer, Netscape Navigator, Windows 98/2000/XP, Adobe Acrobat, Java, ActiveX.
- InfoShare provides a **Master Name Maintenance** feature which allows users with the proper authority to combine two or more people into one record when it is found out that they are really the same person.
- A **record purge** function which permits the administrator to locate records opened in a specific time period and to purge (or return) records with a simple command.

InfoShare

CONTENTS

- 
 - **Subject's Summary:** The Subject Summary screen displays all subject pedigree information such as DOB, SSN, Address, Height, Hair Color, etc.
- 
 - **AKA List:** Tracks and displays all known AKA's for each person in the Intelligence Module and the dates the AKA's became known.
- 
 - **Address/Phones:** Tracks and displays all known Address and Phone Numbers for each person in the Intelligence Module and the dates the that information became known.
- 
 - **Body Marks:** This screen tracks and displays all known body marks a person may have such as scars, marks and tattoos and will associate a picture of the mark with the record.
- 
 - **Images:** Displays all images available for a subject such as mug shots, body marks and fingerprint images.
- 
 - **Sources:** This record lists law enforcement and other agencies which provide information on the subject to the user organization. Date and point of contact are included.
- 
 - **Notes:** Allows a user to enter and track all relevant notes related to the subject whose record set they are in, and allows the user to restrict note access to only him or herself.
- 
 - **Associates:** Provides a listing of persons associated with the subject defining the nature of the association. Each associate has an individual record for information input.
- 
 - **System Dates:** To be used by administration to track all activity made to a subjects record set, who did the activity and the date and time of the activity.
- 
 - **Case List:** The intelligence module can be integrated with other InfoShare modules to track any cases, active or closed that are in the office for the subject.
- 
 - **Arrests:** Tracks all arrests and all pertinent arrest information for the subject whose record set you are in, including date and location of arrest, etc. Provides an arrest report.
- 
 - **Drugs:** Tracks any drugs the subject is known to be involved with and the type of drug activity such as, distributing, buying, possession, etc.
- 
 - **Bail:** The Bail record set tracks all bail information for the subject whose record set you are in.
- 
 - **Vehicles:** The Vehicles records set tracks all vehicles the subject is known to be associated with and records information such as Make, Model, Color, License Plate, etc.
- 
 - **Organizations:** Under the broad categories of companies, law enforcement agencies, social groups, etc. the user builds a file of specific organizations each time they add a new organization to a subject's record.
- 
 - **Locations:** Will track all known hangouts and all related information such as street address, building information, etc. for the subject whose record set you are in.
- 
 - **Documents:** Pertinent documents and crime scene or surveillance photos can be scanned or uploaded into the subjects record set for easy access at a later date.
- 
 - **Name Match:** Will scan the entire database for certain preset information on a subject and provide the user with a list of all possible name matches for a subject using, name, DOB, Address, SSN, etc. to match.

CONTENTS

Easy Access and Durability

Once data is input and documents are scanned and stored, they can be accessed easily and shared simultaneously.

Data Centralization & Easy Data Conversion

One single data input would be applicable to all associated programs, so it provides better coordination between departments and allows management to view the whole picture of the entire operation. It also provides for the easy importation of data converted from older systems, so that no re-keying of previous data is required.

Bar Code Utilization

Clients need not touch the keyboard at all to process critical evidence transactions. Utilizing Bar Code Technology, the clients can scan a label for an evidence transaction. The ease of use and simplicity of this system will help ensure the transaction is complete and accurate.
